CASCADE ISSUES IDENTIFIED

[MAJOR] ISSUE-001 — Power margin reduction

Subsystem: power | Req: L1-PWR-001 | Type: constraint_violation

Removing the right solar panel reduces power generation capacity, potentially exceeding peak power consumption limits during imaging mode.

[MINOR] ISSUE-002 — Thermal margin reduction

Subsystem: thermal | Req: L1-THM-001 | Type: constraint_violation

The removal of the right solar panel may affect thermal balance and stability, potentially increasing ΔT on the optical bench.

[MINOR] ISSUE-003 — Structural balance alteration

Subsystem: structure | Req: None | Type: reanalysis_required

The removal of the right solar panel alters the structural balance and may affect dynamic response during launch vibration.

[MINOR] ISSUE-004 — Mechanical stress redistribution

Subsystem: mechanical | Req: None | Type: reanalysis_required

The removal of the right solar panel may redistribute mechanical stresses, potentially affecting structural integrity.

MISSING ECSS TESTS — NOW REQUIRED

ECSS-E-ST-32C Rev.1 §9 §9 — Shock test per launcher SRS ICD

Reason: The change may affect shock response, necessitating revalidation.

ECSS-E-ST-40C §5.3 §5.3 — On-board compression algorithm validation

Reason: Power margin reduction may impact data processing efficiency and power consumption.
