

BRANCH DOCUMENT — IRIS-3

Branch: branch_20260512_172844 | Base: main-v1.0

Generated: 2026-05-12 17:28

Decision: GO_WITH_CONSTRAINTS | Confidence: 78%

CHANGE REQUEST

elimina il pannello solare di destra

CASCADE ISSUES IDENTIFIED

[MAJOR] ISSUE-001 — Power generation reduced

Subsystem: solar | Req: L1-PWR-001 | Type: constraint_violation

Removing the right solar panel reduces power generation capacity, potentially exceeding the power budget during imaging mode.

[MINOR] ISSUE-002 — Mass imbalance

Subsystem: structure | Req: None | Type: missing_test

Removing the right solar panel introduces an asymmetry in mass distribution, potentially affecting structural dynamics and thermal performance.

[MINOR] ISSUE-003 — Thermal imbalance

Subsystem: thermal | Req: None | Type: missing_test

Removing the right solar panel affects thermal balance, potentially increasing temperature gradients across the payload.

[MINOR] ISSUE-004 — Structural integrity impact

Subsystem: mechanical | Req: None | Type: reanalysis_required

Removing the right solar panel may affect structural integrity and vibration response, requiring reanalysis of mechanical constraints.

MISSING ECSS TESTS — NOW REQUIRED

ECSS-E-ST-32C Rev.1 §9 — Shock test to validate structural integrity after solar panel removal

Reason: Removing the right solar panel may affect shock response and requires revalidation.

ECSS-E-ST-31C §5.4 — Thermal balance test to validate thermal performance after solar panel removal

Reason: Removing the right solar panel may affect thermal gradients and requires revalidation.

SUBSYSTEM STATUS — UPDATED

Subsystem	Score	Status	Detail	Changed
optical	92%	OK	MTF 0.42 > threshold 0.40	—
thermal	61%	WARN	ΔT 14.8°C — margin < 5%	—
mechanical	88%	OK	1st mode 112 Hz > 80 Hz req	—
structure	91%	OK	Mass 33.8 kg / budget 35 kg	—
solar	89%	OK	Power margin +18%	—
startracker	67%	WARN	Stray light analysis pending	—
dataproc	71%	WARN	Compression ratio TBC	—

AFFECTED REQUIREMENTS

No requirements directly invalidated.
